Etere Browsing can be integrated into existing Etere modules; any clip can be searched, browsed, selected and even edited with all related secondary events. Etere has adapted as first in the world, the revolutionary concept of MERP that integrates both internal and external management information for greater efficiency across the entire enterprise. **Etere Ecosystem** is a 100% software solution able to integrate all company's information to facilitate the flow of information between all departments.

## EA1235 - ETERE PROXY BROWSING

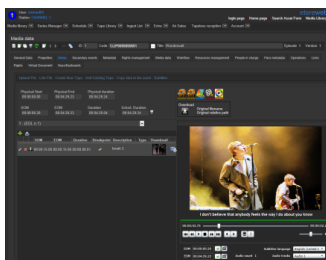

Etere Browsing is a robust solution, highly scalable for small to large broadcast and production facilities. Etere Browsing can be used from an unlimited number of browsing stations; in the same way many transcoding stations can be used to encode HiRes and LoRes media. With its easy-to-use interface, Etere Browsing is designed to reduce complexity, increase operational efficiency and to ensure optimum quality at every step of the workflow.

Stay connected in distributed work environments with Etere browsing that is designed to promote increased collaboration and performances across the entire enterprise.

### Key Features
