HTV Selected Etere

After 5 years of work together, HTV makes a big improvement of its Etere MERP system.

HTV

HTV Headquarters

HTV join ETERE community in 2009 upgrading its old system with ETERE, the new setup was composed by 2 big different video servers, one disk archive and a LTO library system.

Now HTV chooses to expand its system, the LTO Petasite library migrate to LTO5 and upgrade to 500 slots to accommodate the huge quantity of video files that HTV produced during the last years, it's worth mentioning that also the number of LTO drivers managed by the system has got increased to 3 by adding a new Etere Data Pump.

In order to improve the system performance, a new disk archive has been added based on Harmonic MediaGrid.
During the upgrade ETERE 23 was installed to get the enhanced performance provided by the last release of Etere.

The new media managers deliver 30% more performance on the same hardware platform whereas the upgraded transcoding performs 20% faster.

Etere a consistent system!
