

Etere and Tecom Group Inc. Collaborate to Deliver Orbox Integration in Etere MAM Workflow

Etere now offers seamless compatibility with Orbox, an advanced file-based Quality Control (QC) solution, to ensure comprehensive quality and compliance checks for your media files at every phase of the content lifecycle. Each licence can run one process (one file).

Tecom Group

Etere Ecosystem

With this integration, Etere users gain access to the powerful capabilities of ORBOX, enabling quality and compliance assessments through automated workflows. Etere Media Asset Management (MAM) users can effortlessly connect to ORBOX via the user-friendly MAM web interface. Moreover, they can conveniently schedule automated ORBOX scans based on configurable Etere T-Workflow parameters, streamlining their media management processes. This collaboration is made possible through our partnership with the Tecom Group Inc.

At Etere, innovation is at the core of our mission. We are dedicated to continually expanding your options and facilitating seamless integrations to enhance operational efficiency and flexibility.

Etere Media Asset Management (MAM) is a robust software solution designed to manage your media library and streamline your distribution workflow effectively. Seamlessly integrated with ORBOX, this sophisticated MAM system ensures that all Quality Control (QC) results are securely stored within the Etere database. This fully workflow-driven MAM solution empowers users with comprehensive software tools, enabling them to enhance productivity, minimise errors, and deliver content faster. Furthermore, its high availability and distributed system design ensures consistent and dependable performance at every stage of your workflow.

Key Features of the ORBOX Integration in Etere

- Automated tests, saving time and resources when managing large media libraries
- Informative reports for overview and detailed analysis. Reports can be exported in multiple formats
- Built-in templates with customisable analysis rules for various media formats and content sources
- Loudness monitoring and correction ensures your media is compliant with international standards
- Fully scalable architecture provides flexibility to add new analysis servers as and when it's needed
- Media Player: Embedded media player for frame-accurate playback and editing of any video fragment marked as defective
- Rest API: Seamless software integration with any third-party system
- HDR: HDR (High Dynamic Range) metadata compliance and accuracy verification
- QC in the cloud: Available for both on-premise and cloud environments
- Al-enabled video checks: Video checked with Al technology
- Archive of defects: All defective videos are automatically archived for future reference
- Workspaces inside one system for multiple work environments
- Operation under a Linux-based OS

Detection Parameters (70+ checks)

- Audio: Loudness, silence, clipping, mono, audio phase, detection
- Video: Black frames, blockiness, flash frames, combing
- Metadata: Aspect Ratio, Audio/Video Codecs, Chroma Subsampling, Container Compliance, Frame Rate
