# EA2230 Etere CensorMX Audio Auto Censor

Reduce human error and save on resources by automatically censoring live feeds with the responsive, reliable, and accurate Etere CensorMX Audio Auto Censor.

censorMX audio auto censor

CENSORMX

CensorMX

**Etere CensorMX Audio Auto Censor** is a powerful and reliable Live Censorship and Time Delay platform that automatically censors live feeds.

Etere CensorMX converts the live input audio into text before running the text through an online check to pick out any profanity or unauthorized content. If the system finds any such content, the corresponding audio is automatically censored with a bleep.

Users can update the system to include words or phrases they need censored. The method of censorship is also fully customisable. The censorship is instantaneous and fully automatic, saving users time and effort to manually censor material. The specifications of the censorship are as per industry and regional standards.

## Key Features

☐ Mute and Bleep audio features
☐ Anticipate and censor sensitive or inadequate audio
☐ Integrated with database
☐ Reduces human error
☐ Main and Backup configuration
☐ Fast render speeds of up to 100 ftps for export
