Etere

ETX and Multiviewer

For the complete feature story, please refer to the attachment.

The 4K-Ready Channel-in-a-Box solution Etere ETX is designed to deliver audio and video content via the internet, giving users greater freedom when it comes to their live streaming setup with the option to select an RTMP stream as an input source.

An integrated time delay feature allows the flexibility to configure a delay between preview and real-time. The time delay technology of CensorMX is now integrated with both Etere ETX and Etere CensorMX. Time delay can be used in live broadcast to prevent unacceptable content such as profanity and bloopers from making it to air. Not only that, it also enables a multi-language live commentary.

Etere allows users to customise the details of their time delay including:

- Set the number of frames to delay the stream for frame accuracy
- Adjust the compression quality
- Set a time interval for the synchronisation of delayed video

Etere ETX provides synergy between playout, ingest, automation, master control and graphics environments.

About Etere

Since its beginnings in 1987, Etere has been preparing users to be ready for the future. Etere is a worldwide provider of broadcast and media software solutions backed by its mark of excellence in system design, flexibility and reliability.
