EA6780 Etere X264 Encoder

EA6780 Etere X264 Encoder offers greater flexibility and higher-quality encoding for broadcast streaming and recording. The license offers one x264 encoding/streaming.

Etere logo

EA6779 Etere X264 Encoder empowers users with better flexibility and higher-quality encoding for broadcast streaming and recording.

With the x264 encoder, users can leverage key benefits, including,
■ Adaptive quantization in two modes using VAQ. The second mode adapts the strength per frame for an improved quality
■ Psychovisual rate-distortion optimization
■ Macroblock-tree rate control, which controls the quality by tracking how often parts of the frame are used for predicting future frames

About x264

x264 is an open-source library developed by VideoLAN to allow video streams to be encoded into the MPEG-4 AVC/H.264 format.
