Etere Memory Backup TV Standalone is a professional compliance logger software for broadcasters and media companies. Etere users can record transmitted video and audio in a low-resolution format. In media productions, a reliable and flexible backup system is essential. Etere Memory Backup enables main and backup signal recordings for a fully redundant and fault-tolerant system.

As part of the Etere Ecosystem, Etere Memory is database-independent. Additionally, it ensures identical file copies are stored across disk, tape, or cloud storage, with the option for off-site storage to facilitate disaster recovery if required.

Etere Memory is a complete software solution that effectively manages the recording, creating, editing clips, adding metadata, transcoding, and distributing content across various platforms such as VOD, OTT, and social media. This user-friendly software is cost-effective and compatible with any Windows computer. It enables seamless recording and viewing of clips simultaneously, with minimal delay of just a few seconds, to ensure a smooth and efficient workflow.

Etere seamlessly integrates with Etere Ingest, providing a comprehensive solution from ingestion to playout management. From live events to sports and news feeds, Etere efficiently manages live streams using its inclusive HTML5 player, supporting industry standards, including IP with TS, AIMS, and ASPEN.

It features compatibility with file formats, including H264 and WMV, and supports video input cards like Blackmagic. The intuitive software has advanced features, including unlimited recordings/viewings, real-time detection of audio/video issues, SNMP alerts, watermark embedding, web browser integration, loudness control, and play while recording capabilities.

Etere Memory Key Features

- Fully redundant system
- HTML5 player for web/desktop browsing and H265 (MPEG-4) compatibility
- Compliance logger that complies with all the TV regulatory requirements
- Manage content streaming remotely
- Supports clipping for OTT, VOD and social media
- HTTP, UDP, RTSP & RTMP streaming to Wowza Media Server
- Supports analogue and digital video capture boards
- Data protection and advanced redundancy to record files on remote servers
- Unlimited and simultaneous clients/recordings, multiple viewings and editing
- Embedded time codes on recorded videos
- Automatic detection and SNMP notifications for black and freezed video issues
- Metadata marking to identify and search key video parts
- Audience data insertion into logged video files and competitors' record checks
- Supports insertion of logos and timecodes, supports annotation on video
- Includes Etere HSM archiving at no additional costs
- Integration with loudness check and preview with Etere Audience
