EA9246 ETERE VIRTUAL AUDIO MIXER

Designed to offer the capabilities of a traditional console in a touchscreen-compatible software interface, Etere Virtual Audio Mixer delivers powerful performance without the need for expensive or complex hardware. Experience the full capabilities of a traditional console, seamlessly integrated into a sleek and intuitive touchscreen design.

Etere logo

Etere Virtual Audio Mixer is a cost-effective solution for managing audio devices across your LAN from a centralized software console. Experience the full capabilities of a traditional console, seamlessly integrated into a sleek and intuitive touchscreen design. With advanced audio mixing, processing, and control in a virtual environment, you can focus your resources on creating high-quality content while benefiting from significant cost savings.

It streamlines Audio over IP (AoIP) management with an extensive lineup of features, including studio call-in functionality, cue, program, and preview modes, configurable layouts and channel names, dynamic source switching, automatic loudness control, multi-channel management and advanced user presets.

Completely scalable, Etere Virtual Audio Mixer adapts to radio stations of all sizes. In addition, installation, updates, and customization are seamless, eliminating the need for downtime, hefty investments, or intensive training.
