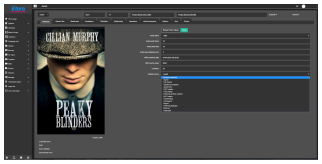
Etere AI



Etere Web Metadata

With Etere AI Movies Metadata, your media library is automatically enriched with the information you need. In just a few clicks, films and TV shows come alive with complete metadata, including posters, backdrops, cast and crew details, ratings, popularity scores, and more. No tedious data entry, no switching between multiple sources, just accurate and ready-to-use content delivered directly into your workflow.

Etere AI Movies Metadata enables users to retrieve key asset details, including titles, original titles, release dates, genres, overviews, taglines, runtime, and status. Visual elements, including posters, backdrops, and logos, are also automatically updated, giving your media library a richer, more complete presentation.

The feature also includes cast and crew information, helping users explore talent connections and organise content more efficiently. Community-driven ratings, popularity scores, and vote counts provide valuable insights into trending titles, while budget and revenue data offer deeper insights into content performance.

Powered by Etere Workflow, metadata updates can be automated to keep your library accurate, complete, and up to date without manual effort. This allows teams to reduce repetitive work and focus on what truly matters: managing, discovering, and maximising the value of their media assets.

Key Features

- Retrieves metadata automatically using Etere Workflow
- Updates key asset details, including titles, original titles, release dates, genres, overviews, taglines, runtime, cast and crew information, and status
- Adds posters, backdrops, and logos to enrich your media library
- Includes community-driven ratings, popularity scores, and vote counts for trend insights
