Etere Web Multiplatform

With unlimited camera support, HDR, slow-motion replay, and frame-accurate navigation, users can capture every detail, make confident decisions faster, and unlock deeper insights during live action and post-game review.

More than just a traditional multiviewer, Etere Multicam Ingest Play provides real-time, field-side insights by displaying up to 16 camera angles on a single screen. Users can easily switch between full-screen, 16-view, 4-view, or 2-view layouts, or compare multiple camera angles side-by-side for a more comprehensive perspective. The solution also supports high-frame-rate ingest and browsing, delivering smooth playback and detailed analysis of fast-moving action.

Etere delivers a powerful live ingest workflow, enabling operators to tag incoming video feeds in real time for faster content processing and highlights creation. Simultaneous creation of high-resolution and low-resolution files, combined with live clipping, sub-clip creation, and export during ingest, ensures fast content delivery and maximum production efficiency.

Built for flexibility and speed, the solution supports multiformat ingest, allowing content to be captured in the format that best fits operational requirements. Its edit-during-ingest capability empowers production teams to begin editing immediately, even before recording is complete, significantly shortening turnaround times for live and near-live productions.

Integrated with **Etere Media Asset Management (MAM)**, multiformat clips are managed as a single logical entity for streamlined content administration. In addition, ingest signal quality control (QC) automatically detects and tags anomalies in live signals, ensuring content quality and operational reliability.

Additionally, built-in reporting and export tools allow users to generate video clips and detailed match data, making post-event review faster and more efficient.

Why Choose Etere Multicam Ingest Play?

■Review every moment with confidence using frame-accurate playback
■Analyze action in greater detail with HDR and slow-motion replay
■Scale effortlessly to meet the demands of any sporting event
■Remote access from any internet-connected device
■Insert metadata tags on every live video feed during ingest, enabling efficient highlight creation and downstream content processing
■Generate high-resolution and low-resolution media outputs during ingest
■Support live clipping, sub-clip creation, and instant export during ingestion
■Multi-format ingest with the flexibility to accept and process any file format
■Fully compatible with editing workflows, supporting edit-while-ingest operations
■Integrates with Etere MAM to manage multi-format clips as a single media file
■Quality control (QC) to automatically detect signal anomalies in live feeds
■Supports input formats including SMPTE ST 2110, SMPTE 2022-7, SDI, NDI, SRT, UDP, RTMP, and RTP
