

ETERE AI MUSIC METADATA

With the launch of Etere AI Music Metadata, you no longer need to enter music metadata manually. When a song is detected, Etere automatically retrieves the key metadata including title, genre, record label, release date, and cover artwork.

Etere AI

Etere Web Metadata for
Soundtrack

Etere AI Music Metadata makes management of your music and media library faster, smarter and easier. As soon as a music file is ingested, songs are identified automatically and their metadata added directly to the media library. The result is a richer, cleaner, and more organised media library - all without adding another manual task to the workflow.

Key Features

- Fully integrated workflows - music metadata is retrieved automatically when files are ingested, processed, archived or prepared for delivery
- Reduce manual workload and keeps your media library updated as new information comes in
- Automatically retrieves key metadata as soon as a song is identified - artist, album title, record label, release data and more
- Includes graphics metadata such as cover artwork
- Makes content discovery much easier as search results can be better organised by artist, album, genre, release information and more
- Archived content can be retrieved and repurposed quickly
