VTV9

VTV9

Etere extends its long-running relationship with Vietnam's national television broadcaster, VTV, with a fully redundant playout automation setup for VTV9, a TV station owned by VTV. The channel screens curated content for TV viewers in Southern Vietnam. The installation helps the station to streamline its playout automation workflows and achieve new efficiencies in its daily operation. Furthermore, the **Etere Ecosystem** framework provides opportunities for future upgrades without disruptions to the daily operations, making it a system that would match the needs of the station even as it evolves.

Pivotal to the installation is the **Etere Automation** which allows VTV9 to manage their playout operation with smart customization functionalities and workflow automation. In addition, Etere Automation features real-time device control for an integrated management.

Key Features of Etere Automation

- Start and end points on videos are stored on the system database
- Ingest jobs can be automated to reduce manual work
- Live recordings are supported and these can be manually triggered or pre-scheduled
- Play while recording is supported on every device
- Full redundancy
- Runs independently from the Etere SQL Server for a fault-tolerant performance

Etere Automation is a module in the revolutionary Etere Ecosystem software-defined framework which integrates and facilitates the flow of information between cross-functional departments in the company. It is an open system that allows third-party software to be incorporated easily. Etere Automation integrates with VTV in-house software as well as its third-party master control, graphics and Media Asset Management, through the use of API. Etere also provides a high level of security and fault-tolerance to protect critical media data.

With the new installation, VTV9 establishes a strong foundation to prepare for the broadcast needs of today and the future.
