SeaChange has recently launched a new Media Server device, the multichannel MSV1000 ingest and playout server that delivers the renowned reliability of SeaChange's storage servers with the flexibility of its software-based codecs in a 2 RU footprint.

This product lowers the point of entry for broadcasters to begin realizing the efficiency of file-based workflow solutions, such as those offered by Etere.

Etere announces that has developed a special package for SeaChange MSV1000 to fit the requests of a small TV stations with good value for money, this tailored solution offers build storage-efficiency, highly reliability and scalability to meet all specific requirements. Etere's special package for the MSV1000 server includes:

- Automation of up to 2 TV channels,
- Unlimited preview licence,
- 3 workstations license,
- Primary and secondary event control,
- Router control ,
- CG control,
- Logo generator control,
- Etere Asset management,
- Advanced playlist management,
- Microsoft SQL2008 Express licence,
- 12 months of unlimited support calls and VPN connection,
- 3 days of free training in Italy.

A VPN remote installation of the system is included in the special package, allowing customers to save their investment. If an upgrade to the Etere full version is performed anytime after the purchase of the special version, Etere will discount the full software value of the special MSV1000 package from the amount of the new package.

Once again Etere provides a flexible package designed for cost-effective operation and customized broadcast solutions, developed under a distributed architecture, and able to carry out in the best way all the phases present into the broadcasting process from the ingestion to the playout.
