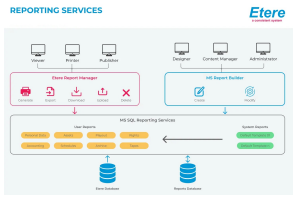
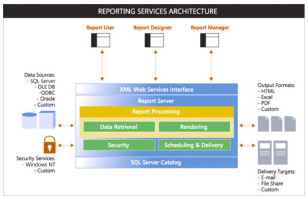
EA6846 ETERE REPORTING SERVICE

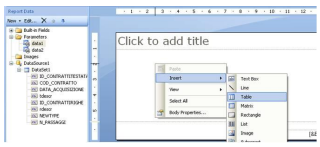
The tool uses the powerful engine included on Microsoft SQL to create any kind of reports



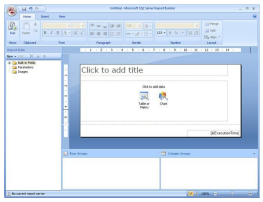
Etere reporting service



Reporting Services Architecture



Microsoft report data



Microsoft report builder

Etere includes a powerful tool since to be successful in today's competitive marketplace, organizations must extend information beyond the walls of their association and seamlessly interact with customers, partners, and suppliers in real time. Etere Reporting Service uses the powerful engine included on Microsoft SQL to create any kind of reports; those powerful design tools to author reports accommodating any reporting need. Empower every business user with interactive, personalized, and relevant reports or simply enable it to build its own reports.

With Etere reporting services Customers can create their report or modify an existing Etere report to create their own layout. Etere controls the export of the report schema to be managed with Microsoft report designer, and then imported in Etere to appear as a choice in Etere report form. With this approach the minor modifications are easy to complete even without a deep knowledge of Sql language and database, but simply using a visual tool.
