

EA6770 ETERE VIDEO EDITOR (UNLIMITED LICENSE)

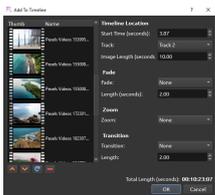

Etere Video Editor is an extension of the Etere Media Asset Management solution. Users are able to edit and enhance files stored in the MAM database. This is also a very powerful tool for NUNZIO newsroom also.

etere video editor

video editor

video editor

Professionally edit videos, advertisements, news clips and more with **Etere Video Editor**. Part of the **Etere Media Asset Management** solution, users can now edit and enhance files that are stored in their MAM database. **Etere Video Editor** provides users with a full suite of editorial tools to edit videos, create animated titles and effects, and refine audio, all in one fully integrated software.

Part of the **Etere Media Asset Management (MAM)** system, **Etere Video Editor** is directly connected to the **Etere MAM** database, allowing for users to easily modify media items already stored in the connected database. The connection also streamlines the import and export process into the **Etere Video Editor**, saving users plenty of time. The integration into the **HSM system** ensures that all files are safely archived, ensuring that no media is accidentally lost in the editing process.

Integrated with Nunzio Newsroom, users can quickly add and prepare their clips and videos when all their files are connected in the system, perfect for a fast paced environment where quick additions and edits are needed. Save and edit old and new projects directly from the database, and insert graphics, text, and effects as needed.

The user friendly **Etere Video Editor** ensures that even beginners will be able to use this software to streamline their workflow by providing a quick editing and export process. Offering a wide range of editing tools such as fully customisable transitions and effects, as well as in-depth direct audio editing that allows users to edit audio tracks, **Etere Video Editor** is a well rounded system that adds on to the well rounded **Etere MAM** workflow.

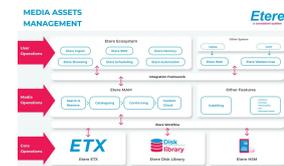

Key Features

Integrated with Media Asset Management and HSM

Etere Video Editor is directly linked to the **Etere Media Asset Management (MAM) system**, streamlining your production process as not only can you save projects to the **MAM** database, you can edit the media and objects stored in your **MAM** database, and your work will be safely archived by the **Etere HSM Archive**.

Powerful Editing

With a strong key frame animation framework, **Etere Video Editor** introduces an unlimited number of key frames and tracks and layers allows users to animate and enhance anything in their videos. Users are free to preview their work whenever with the unlimited preview system. Equipped with over 400 transitions, animations, and effects, including brightness, gamma, hue, greyscale, chroma key, slow motion time effects and more. Equipped with fully customisable features, either use the preset effects or edit the playback speed and direction. Users are able to perform in-depth edits of the audio such as splitting the audio from your video clip, and adjusting each audio channel individually. The Etere Video Editor uses a user friendly drag and drop access, making it a usable system even for beginners.
