

Etere Subtitling and Closed Caption System receives a free update

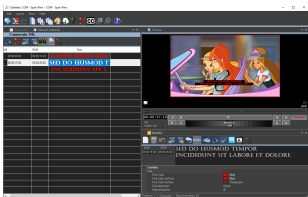

Users can now alter fonts and text size of subtitles in open caption, making your programs unique and stylish. Edits continue to be quick and user friendly, allowing for quick changes for both fast paced event coverage and recorded broadcasts.

Etere Subtitles
Management workflow

Users of Etere Subtitle and Closed Caption software can now use the Subtitle Management tool to create more customised subtitles within the open captions. The subtitle management tool now allows users to alter the text font and size of open captions before the program goes on air. Users can arrange the position of the text to suit the broadcast, and create subtitles that match the type of broadcast.

This added subtitle management allows for users to make quick edits to suit the nature of their program and allows for more creativity and leeway for optimal changes.

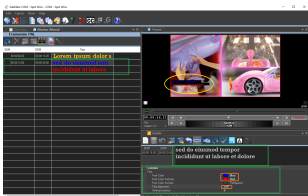

subtitle management

With the drag and drop feature of the text creator, users can continue to make fast edits in time for a fast paced news environment as well as recorded broadcasts.

This is a free update available to all customers under support contract.

For more information please pursue the full user guide here **[Change subtitles font type and font size Guide](#)**.
