

## Etere MAM Manages Multi-Language Content

Etere takes its MAM capabilities to the next level with the latest release of unlimited multi-language metadata with easy insertions.

Multilanguage GUI

Artist Manager

Etere Web Multiplatform

Discover the flexibility of **Etere Media Asset Management (MAM)**'s multi-language capabilities that bring its software usability to the next-level. As audiences expand their media consumption habits, it is increasingly important for systems to be adaptable to the evolving market demands. Etere allows you to expand your media distribution channels and publish content on multiple platforms, without a change in your software infrastructure.

Etere users are now empowered with the flexibility to add content and metadata in multiple languages including in English, Arabic, Georgian, French, Japanese, Russian and more. Metadata including tasks, genre, roles and artists tables are automatically translated for the compilation of the perfect EPG, all without the need to set each parameter manually.

Besides a multi-language GUI, Etere allows you to insert the correct metadata to expand content discovery possibilities for users in your target market. Localization of content helps broadcasters and media distributors to expand advertising opportunities in their target markets.

Running on a secured Windows and web platform, Etere MAM is accessible on smart devices including tablets, mobile phones, giving you the maximum freedom to work from any location, even while on the move. All that is needed is a secured login from any internet browser.

### Key Features
