Switching to DAYLIGHT-SAVING TIME – Last Saturday of March, from 2am to 3am

- **Workstations - Server**

All workstation have to be synchronized with the server and programs Servtime, Time Receiver or a program that equally runs as service on a NT workstation.

Automatically switching to daylight-saving time must be enabled on all workstations in their regional settings.

Automatically switching to daylight-saving time must be enabled on the server.

- **ETERE Software**

On ETERE Main, you must create a schedule that lasts 23 instead of 24 hours so to compensate the time change, and the schedule must end at 11pm instead of 12am.

On Etere Main, don't forget not to link the schedule to the previous one.

Next, it will be necessary to correct manually the schedule for the "As run logs", by updating the automation schedule as usual.

Switching from DAYLIGHT-SAVING TIME – last Saturday of October from 3am to 2am

- **Workstations - Server**

All workstation have to be synchronized with the server and programs Servtime, Time Receiver or a program that equally runs as service on a NT workstation.

Automatically switching from daylight-saving time must be enabled on all workstations in their regional settings.

Automatically switching from daylight-saving time must be enabled on the server.

- **ETERE Software**

On ETERE Main you must add an event from 2am till 3am, by making your schedule last 25 hours, and so it will end at 1am of the following day instead of 12am.

On Etere main, don't forget not to link the schedule to the previous one.

Next, it will be necessary to correct manually the schedule for the "As run logs", by updating the automation schedule as usual.
