Media Manager + Archive

ETERE created a software module, able to connect a videoserver to the archive, simply and economically

---

▷ **A solution THAT DOESN'T REQUIRE an Archive Manager**

▷ **100% software based on a Windows platform**

▷ **Integrated with Windows Remote Storage**

▷ **Integrated with Windows Removable Storage**

ETERE is the software that, apart from taking control over the whole audio/video material and also organizes it, from today takes care even of the archiving.

ETERE Media Manager + Archive is a plug-in of the famous ETERE Media Manager.

It revolutionized into software that doesn't request an Archive Manager for its connection to a library.
When you wanted to connect an archive, your system should have had an archive manager and one or several data movers to control the library; and this is the revolutionary thing of + Archive: the only thing you really need is ETERE + Archive.
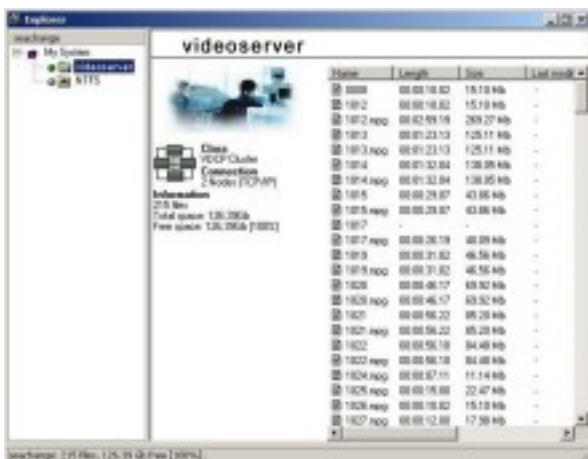

**ETERE Media Manager + Archive** has all the following functions:
- Archives an unlimited number of files
- Archives files of any size
- Creates emergency and backup copies, up to 3 copies per a tape
- Supports a large number of libreries and it's fully scalable
- Supports a large quantity of drivers on the market
- Fault Tolerant
- Its tapes are MTF (Microsoft Tape Format) and that for can be read on any Windows system
- Moves files from one server to another
- Moves files to and from the archive

There's no other broadcast agency able to offer you all this in the simplest software.
Even for this function, as for all others, ETERE has developed and used pure software.

The solution is simple, elegant, and much more reliable than you think. Besides, a simple solution is always economical, and "ETERE Media Manager + Archiving" is within everyone's reach.

ETERE Media Manager + Archive is integrated with ETERE database and doesn't request another database for HSM.

Archiving policies come out directly from the On-air system: a single click is enough for all functions.
ETERE offers you an integrated solution whether your system has only one or many videoservers, whether it has only one or many archive managers.

It's based on Microsoft Windows 2000 ® platform, so you have the possibility to organize a huge archive with the whole power offered by a SQL database.

It doesn't need any extra hardware, but only a Windows standard platform and it's compatible with all videoserver supported by ETERE Automation.
