▶ **Etere Press Release**

Etere Compliant with Media Grid

February 2007 – Etere releases Mediagrid set of drivers

The Italian company is never satisfied of its product and always looks to improve it.
Etere does not fear the comparison with others and this time went to Media Grid to look for compliance.

In Taipei from 2 to 11 February Etere checked live the Media Grid support, via FTP and NTFS
Media Grid is used from Etere as:

- Disk library
- Videoserver extension
- Tape library cache
- Etere transcoder archive

During the tests all those functions were checked in different scenarios and in any case all tests conducted gave a positive outcome.

The Media Grid archive was used from Etere traditional interface and Etere web interface.

Also Media Grid was interfaced as second level cache with a Sony Petasite with LTO tape drives.

Also Etere checked the Unicode support of Media Grid archives.

Following the equipment of the test environment:

Xdcam Sd deck (used for Ftp ingest and Dubbing)

Omneon spectrum

Media grid main

Media grid backup (to test a disaster recovery site)

Sony petasite with Lto drives (as deep archive)

About Etere

Established in 1987, Etere is the leading Italian company providing worldwide software broadcasting solutions. It is the only company able to offer in one software all a TV station needs for its playout:

Etere fits your needs perfectly.

With our young team of engineers and technicians, we are focused on developing and improving the product and with twenty-four/seven x 365 support we can reach and help our clients for any need all around the world. With our selling network we are always near you…

For some the future is tomorrow, for Etere the future is today.
