# **Etere 27.3.0.1**

# Etere v27.3.0.1 (Release date: 12/7/2017)

### **New Features**

All new features listed below are for version 27.03. All new features included on this released would be available throughout all modules that compose the Etere's integrated solutions.

Etere Module	Feature Description	Reference
Etere SQL Database	Enhance Stored Procedure to format the ID of secondary event to 10 digits.	206709
Scheduling	Add Tapeless reception column to Executive Editor's interface to display media asset information.	185166
MAM	Display active workflow name in View Workflow window.	195509
Scheduling	Display the Start Time and End Time of each secondary event in Executive Editor.	205152
Scheduling	Introduce the Push feature for import, including the relative calculation of dedicated variations. In addition, add Push function in the Executive Editor's Functions menu bar to allow changing its properties.	200920
STMan	Enabled sending commands using low ercase P.	208560
MAM	Add new feature in Subtitles Management to import (and Export) subtitles in scenarist closed captions (SCC) file format.	207622
MAM	Add new function icon "Word wrap" in Subtitles Management, subtitles with long string of words would be broken into next line to fit into the display window.	207621
MAM	Import all subtitles scripts in one step.  - By implementing "Add text to cursor (F11)" icon at the toolbar, text subtitles can be imported automatically by positioning the cursor and pressing the F11 function key.	207619
Configuration	Create a w orkflow action to update asset data on remote site through Etere API.  - Add predefined w orkflow action "Update Remote Asset" to the w orkflow template.	206424
Reporting Service	Request for new report to capture the used space and free space in the selected cloud-device.  - Created new report "Device space per user".	167406
Air Sales	Implement security check when restoring segment based structure.  - User would be prompted to enter key word to proceed with the restoring.	190741
Money	Create "Account Credit" feature to handle advanced payment made by customer to pay off future invoices.	154251
Tape Management	In Tape Library, display the search results page-by-page and deploy control buttons to manage pages	148609
MAM	In Media Library, implement a function to export virtual documents from the selected assets to a specified path.	162612
Configuration	Includes a Value parameter in workflow action "Flexi-metadata Set Value" to indicate the predefined values from the list of value to be assigned to the metadata.	183830
Import/Export	In IMPORT_STANDARD_GENERIC_TXT, includes an option to enable import text schedules if the schedule date is a past date.	205247
BMS	In the Purchase Orders display, allows to sort the Description column to locate those contracts with several order lines.	200763
Air Sales	In Purchase Order module, include the filtering of asset code, asset title and season when searching for available rights.	197017
Air Sales Lite	In Series Manager, add an "ID" column in the Episode tab to display the Etere asset ID for the episode	183462
Scheduling	In Secondary Events module, insert a Cut function in the toolbar to cut the selected single secondary event.  - Before this enhancement, the cut function in Ewould cut all secondary events, it does not allowed to cut single event.	207256
Scheduling	When replacing secondary event using the script sting, add a "Parameter" to filter the frequency of secondary object and replace the object only when it matched the parameter value.  - Filtering by script string alone would not seamlessly locate the graphic objects due to same script could be used by multiple graphics	207279
Configuration	In Person Data Form, extend the maximum characters for City parameter from 40 to 100, and display the first 50 characters when printing invoice report.	196754
Configuration	Add Ross Master Control MDK-111A-Lite and Ross Logo Generator MDK-111A-K to the Resource List.	208148
Configuration	In the "Delete from Device" w orkflow action include an option to delete all database files from the selected device.  - Without this option, user need to select the codecs containing the metafiles to be deleted.	207699

Etere Module	Feature Description	Reference
EtereWeb	In EtereWeb, enable page selection using single-arrow button (go to next page/back to previous page) and double-arrow button (go to last page/back to first page).	183071
EtereWeb	In EtereWeb, w rap the asset title in thumbnail view to display asset full title.	183067
Configuration	Change the field type of existing flexi-metadata from integer to string.  In Etere released version 27.3, it is possible to convert the type of flexi-metadata into following types:  INT -> STRING  INT -> REAL  REAL -> STRING  REAL -> INT  STRING -> INT  STRING -> INT  DATETIME -> STRING	200607
Configuration	Create a default workflow to be launched daily when a schedule is successfully published, the workflow would send warning email to user when there are missing media files in the server or there are assets not ready to be broadcast.	196531
MAM	In Media Library search filter, once the "begins with" option in the "Title" field is disabled it remains status que each time the search function is launched.	207976
Ingest	When ingest with ETX, enable user to preview the audio VMeter during recording New parameter "ETX-View VMeter during ingest" has been deployed to enable this feature	207495
Nunzio	In Nunzio, currently user can only search for stories created by journalists, it would be useful if user can search for stories created by dates.  - An option has been deployed in Standard search to filter stories created within a specific date range.	206372
Nunzio	In the Rundown section, there is no option available to delete obsolete templates.  - In Rundown Editor, a "Delete" option has been added to function menu to remove the selected template to the recycle bin.	204883
Import/Export	Add condition <tag> to import and export to manage relationship of Child / Parent assets.</tag>	206231
All modules	When Etere applications are installed on workstation with multiple IP address, a warning message would be prompted to alert user. User needs to acknowledge the message before accessing to Etere Applications.  - In Etere released version 27.3, the warning message would closed after 10 seconds without user acknowledgment.	207762
EtereWeb	In EtereWeb, indicate the scheduled ingest status using colour codes E.g. Error (red), Waiting (gray), Ingesting (lime)	208988

### **Bug Fixes**

Identified bugs submitted by our customers have been addressed in this released version to improve the quality and reliability of Etere applications, most important bugs fixed with this release includes the following ones:

Etere Module	Feature Description	Reference
Air Sales	After installed Etere Applications on Windows 10, when accessing to Air Sales > Contracts > rows > Scheduling > allocate space, the process was not visible after activate the "customize" feature. The allocate space feature was hidden behind the customize feature.	207360
Automation	After upgraded from version 26 to version 27 customer experienced in automation where the fixed event was skipped and following event was broadcasted.  - It was revealed that the fixed event was played correctly but the live switch to the video server does not took space.  The enhanced "etereau.exe" was available from version 27.2 onwards	207100
EtereWeb	When new user login to Etere Web with a correct user name and password, the application prompted wrong password but the login was successful.  - The false login error message has been addressed.	206904
Import/Export	Customer reported adjustment calculation error during import.  - The import issue has been addressed with new version of ImpMed.dll (v27.03.08.09) and ImportMediaset.exe (v27.03.06.90).	209082
EtereWeb	After upgraded to EtereWeb version 27 the Media Library tab and Series tab were missing from the Etere Web interface.  - The missing tabs was due to licensing issue. The required licenses would be included in new release.	210856
MAM	Customer encountered exception error during updating of EDL from ingest, the exception error were overlook by operator.  - In Etere released version 27.3, warning message would be displayed in EDL to alert the operator.	208252

BereWeb   During the Elere version uggrade from 24 to 26, when user accessed Tapeless Reception in Elere Web to view assets to be sent with option "Show also expired assets" enabled, there was no asset displayed.  - This issued has been resolved in Elere release version 27.3.			
More window.   She re released version 27.3, the commercial note pertaining to the asset properties would be retained after the import.	EtereWeb	view assets to be sent with option "Show also expired assets" enabled, there was no asset displayed.	179416
Automation  Automa	Import/Export	Note w indow In Etere released version 27.3, the commercial note pertaining to the asset properties w ould be retained	208917
When preview ing video output, if the parameter "Audio" format is set to <a href="AutonNot Specified">AutonNot Specified</a> , the output preview format should adopt the video source format, without up-conversion or down-conversion took place.  When printing invoicing report for active clients and inactive clients, there were pages missing in the generated report.  - New version of ElTrafficPrint.RPT and ElFatturazione.dll has been included in this new release to address the problem.  BereWeb	Automation	Customer encountered error while migrating Automation to VM with ADAM 6060 GPI card, the switching from master to clone does not take place.	168466
When printing invoicing report for active clients and inactive clients, there were pages missing in the generated report.  New version of ETTafficPrint.RPT and ElFatturazione.dll has been included in this new release to address the problem.  BereWeb When accessing Media Library through Etere Web, user could not save changes made on production date. The issue has been resolved in Etere released version 27.3.  When accessing to search function through Etere Web, user encountered exception error when searching for asstes within production date range. The issue has been resolved in Etere released version 27.3.  Video clip with non-zero based time code could not be preview in MTX server. On Eter released version 27.3, the MTX server driver has been enhanced to play video file with non-zero based time code could not be preview in MTX server. On Etere released version 27.3, the MTX server driver has been enhanced to play video file with non-zero based time code.  MTX When switch from MTX Server to Live, the Live went on-air before the previous clip ended. In the resource editor, change the "Percoll Time" parameter in resource feature to be expressed in millisecond instead of expressed in frames.  BlereWeb In EtereWeb, when user add Genres to asset in Media Library and pressed the "Eter" key the changes does not that see iffect. In Etere released version 27.3, it includes an ability to better managing the keyboard.  In Bere released version 27.3, it includes an ability to better managing the keyboard.  After analysed the log, it was revealed that the encoder was restarted during ingest and resulted discrepancy in duration. A time check has been enhanced in Etere new release version to monitor the recording, the recording would be aborted if the interruption is longer than 15 seconds.  Scheduling After events did not went on-air as per scheduled at around 8pm. Investigation revealed that operator had opened next day schedules and unintentionally restored the schedules from today to next day and resulted the current day	ETX	When preview ing video output, if the parameter "Audio" format is set to <auto not="" specified="">, the output preview format should adopt the video source format, without up-conversion or down-conversion took</auto>	189530
- The issue has been resolved in Elere released version 27.3.  When accessing to search function through Elere Web, user encountered exception error when searching for asstes within production date range.  - The issue has been resolved in Elere released version 27.3.  Video clip with non-zero based time code could not be preview in MTX server.  - On Elere released version 27.3, the MTX server driver has been enhanced to play video file with nonzero based time code.  MTX  When switch from MTX Server to Live, the Live went on-air before the previous clip ended.  - In the resource editor, change the "Ferol Time" parameter in resource feature to be expressed in millisecond instead of expressed in frames.  ElereWeb  In ElereWeb, when user add Genres to asset in Media Library and pressed the "Enter" key the changes does not take effect.  - In Elere released version 27.3, it includes an ability to better managing the keyboard.  In Scheduled Ingest, the duration of scheduled file does not matched the physical duration.  - After analysed the log, it was revealed that the encoder was restarted during ingest and resulted discrepancy in duration. A time check has been enhanced in Elere new release version to monitor the recording, the recording would be aborted if the interruption is longer than 15 seconds.  Scheduling  All "Ready to air" events did not went on-air as per scheduled at around 8pm. Investigation revealed that operator had opened next day schedule and unintentionally restored the schedules from today to next day and resulted the current day schedules to move backwards to 4.19am.  - In Elere released version 27.3, restoring schedules into today schedules would be prohibited.  STMan  The Secondary Events were squeezed from the backup server, where there was no abnormality reported on the main server.  - From the log, no communication error was detected. In Elere released version 27.3, the log feature would be enhanced to capture more log details for problem analysis.  Automation  A clip was not aired on the mai	Reporting Service	When printing invoicing report for active clients and inactive clients, there were pages missing in the generated report.  - New version of EtTrafficPrint.RPT and EtFatturazione.dll has been included in this new release to address	210763
for asstes w ithin production date range.  The issue has been resolved in Etere released version 27.3.  Configuration  Video clip w ith non-zero based time code could not be preview in MTX server.  On Etere released version 27.3, the MTX server driver has been enhanced to play video file w ith non-zero based time code.  MTX  When switch from MTX Server to Live, the Live w ent on-air before the previous clip ended. In the resource editor, change the "Peroll Time" parameter in resource feature to be expressed in millisecond instead of expressed in frames.  EtereWeb  In EtereWeb, w hen user add Genres to asset in Media Library and pressed the "Enter" key the changes does not take effect.  In Etere released version 27.3, it includes an ability to better managing the keyboard.  In Scheduled Ingest, the duration of scheduled file does not matched the physical duration.  After analysed the log, it was revealed that the encoder was restarted during ingest and resulted discrepancy in duration. A time check has been enhanced in Etere new release version to monitor the recording, the recording would be aborted if the interruption is longer than 15 seconds.  Scheduling  All "Ready to air" events did not went on-air as per scheduled at around 8pm. Investigation revealed that operator had opened next day schedules no move backw ards to 4.19am. EtereWeb After upgraded to version 27.1, when user login to EtereWeb user without "EtereWeb\Modify asset" rights assigned can modify the asset form.  - The user rights assignment has been rectified in the new release version.	EtereWeb	After upgraded to version 27.1, when user login to EtereWeb user without "EtereWeb\Modify asset" rights assigned can modify the asset form.	207323
EtereWeb In EtereWeb, user assigned to single group can starts all workflows in the system.  - In Etere released version 27.3, workflow could not be started if it does not associated with an asset.	EtereWeb	In EtereWeb, user assigned to single group can starts all w orkflows in the system.	207069

MAM	After downloaded "ETRC_Forms.dll" and "EtPreview LQ.dll" of version 27.2, other than default flexi-metadata such as Code, Tyoe, Title, Duration, customer could not perform sorting on user-defined flexi-metadata.  - In released version 27.3, ETRC_Forms.dll has been enhanced to resolve this issue.	208879
Configuration	When coping files encrypted with MD5, the MD5 strings on packaging actions are not copied to the destination folder.  - The MD5 feature has been addressed in released version 27.3. How ever, it is not recommended to copy zipped file containing MD5 checksum files from source to destination as it could result in discrepancies in checksum values.	207873
Configuration	The "Delete from device" action delete file from specific device but it does not delete files from codecs.  - In Etere released version 27.3, it includes a parameter for selection of codecs and delete the metafiles in the metadevice.	207506
EtereWeb	In EtereWeb, while default workflow is running, user is allowed to link file to the asset despite warning message prompted.  - In Etere released version 27.3, the Link button would be disabled during the execution of workflow.	206893
HSM	In HSM Headquarter, good tapes are marked as "Unusable".  - A Recovery option has been embedded in the media feature to send tape marked as "unusable" to Datapump to perform the recovery process.	207052
Configuration	Using the Multistep Copy action with process settings "Notify error if name already exists in database" enabled, the setting could not be saved.  - The reported issue has been resolved in released version 27.3.	208818
ActiveSync	In ActiveSync, three assets ingested were without descriptions in the title field. Investigation revealed that there were 2 ActiveSync instances started by current user in the workstation.  - In Etere released version 27.3, ActiveSync would check for active instance in the workstation started by current user during workstation startup, if found, the ActiveSync would terminate and trigger a warning message to alert user.	209886
Configuration	In Workflow Designer, user was unable to detach workflow using Replace Action tool.  - The incident has been resolved with new version of DLL (etsqlscripts.dll) to be included in Etere new release 27.3.	210651
Automation	Freeze frame occurred on both main and backup servers, after w hich, video clip continue to run on both servers but playout are not in sync. Investigation revealed that it w as due to clip change detected delay exceeded 1 frame and resulted the discrepancy.  - The PAS file has been recompiled in released version 27.3 to address the issue.	202237
EtereWeb	Memory cutting generated MP4 file with format different from original format, the file could not be played by streaming server.  - The issue has been address in released version 27.3 to retain its original format after cutting file.	205859
Scheduling	Too many obsolete icons of old scheduled event appeared in Executive Editor when user create new schedule by copying events from old schedule and paste on new schedule.  - This problem has been resolved in released version 27.3 when using the copy and paste method to create new schedule, all icons for transmitted events and secondary events would be reset.	207777
Scheduling	Unknown user "eteref90@schedule.777" appeared in Schedule access log.  - Etere explained that this user profile was created By Executive Editor to launch the configured exports to EtereF90. It would be removed from the access log in released version 27.3.	207911
Automation	When switching from Live to video server, the playout did not took place.  - In released version 27.3 the schedule start command has been enhanced to delay schedule starts after the switch.	209350
EtereWeb	When user with specific rights "EtereWeb\Show Extramenu" and "EtereWeb\SNMP" assigned, the Extra menu and SNMP console button were not displayed.  - Investigation revealed the application license was not in place.	207568
Air Sales	In Weekly Schedule, the end time does not corresponding with the start time, e.g. the end time should displayed as 00:30, instead it was wrongly displayed as 23:30. The issue has been addressed in Etere new released version 27.3.	209762
