TVRI-Indonesia Upgrades its Graphics Animation systems

Print | Bookmark

Indonesia's state-owned TV station, TVRI, has once again selected Etere ETX-G for its graphics MAM capabilities and live graphics playout integrated in the airsales system.

Since 2005, TVRI has consistently improved the management of its broadcast systems. Televisi Republik Indonesia (TVRI) is a state-owned television station and the only broadcaster in Indonesia with national coverage. Once again, TVRI renews its confidence in Etere with its addition of Etere ETX-G for the management of its commercial graphics workflow.

Etere ETX-G is a 4K-ready professional commercial graphics playout software that enables SDI-support, real-time previews, instant addition and deletion of graphics anytime before playout. Its powerful features within a simplified software framework allow it to be easily deployed, commissioned and maintained. TVRI leverages the benefits to manage its live graphics playout with Etere Airsales integration for a more accurate invoicing process.
